EXPERIENCE

Electronic Voting Engineer
Gedivote
November 2025 – Present Remote
- Platform development (general, security and cryptography)

Security Research on Internet Voting
CNRS
March 2025 – August 2025 Nancy
- Design of voting protocols with ballot stuffing
- Development of zero-knowledge proofs
- Formal verification with ProVerif

Fullstack Developer - React + e-voting
Scrutin.app
February 2023 – February 2025 Remote
- Design of an open-source web and mobile internet voting software
- Development of a Belenios implementation

Fullstack Developer - Django + e-voting
Electis
July 2022 – January 2023 Paris
- ElectionGuard integration
- Adaptations for works council elections

Fullstack Developer - Ruby on rails + Vue
Winddle
August 2021 – May 2022 Paris

Replacement of Backbone.js logic with Vue.js and SQL query optimization.

Cybersecurity Engineer
Stormshield
November 2020 – July 2021 Lille

Development around TPM, IPSEC, and FreeBSD.

C++ Developer - Video Games
Eko Software
September 2014 – October 2020 Paris

Development of a game engine running on multiple platforms (PS3, PS4, Xbox One, Switch). GPU and shader development. Creation of web tools for managing player databases.

EDUCATION

Master's in Computer Science and Cybersecurity
University of Lille
September 2023 – August 2025

Computer Science Training
École 42
September 2013 – June 2014

Bachelor's in Computer Science
Pierre and Marie Curie University (Paris VI, now Sorbonne University)
September 2009 – June 2013

Self-taught Learning
127.0.0.1
December 1991 – Present

Site du Zéro, Developpez.net, Coursera, IRC, Stack Overflow, ArchWiki, /usr/bin/man

SKILLS

GNU/Linux, TCP/IP, HTML, CSS, JS, TS, React, Vue, Angular, Elm, Backbone.js, Express.js, SQL (PostgreSQL, MariaDB), Bash, Ruby (+ Ruby on rails, sinatra), Python (+ Django and Flask), PHP (+ Laravel), .NET, C#, Elixir (+ Phoenix), Java (+ Spring), OCaml, ReScript, Perl, Java, Lua, C, C++, Rust, Nix, Docker, Ansible, Git, Vim

LANGUAGES

French ●●●●●

English ●●●●◐

Spanish ●●●○○

PROJECTS

Scrutin.app

2023 - Present

An *easy-to-use* and *secure* internet voting platform based on the Belenios voting protocol (React Native + Node.js). (source) (demo) (doc)

Sirona

2024 - Present

A tool to interact with elections created with Belenios.

Posca (contributor)

2024

A Matrix client with social network features

Kazarma (contributor)

2023

A Matrix <-> ActivityPub bridge

Zero

2023

A prototype of metadata-free messaging inspired by Bitmessage.

Ami

2013 - ...

A hackable homepage, self-hosted or local. Currently delegates to other sites (Wikipedia, ...) based on bangs (!w, ...). Usable as a default search engine in Firefox. (v1) (v2) (v3)

Safebook

2011 - ... (paused)

An experiment in end-to-end encrypted social networking. Originally a browser extension adding an "Encrypt and send" button to Facebook and decrypting friends' messages on the fly.
